

Directorate of Curriculum and Teacher Education

Khyber Pakhtunkhwa, Abbottabad.

Induction Program Phase-IV. (Exam-I)

For All Cadres

Time: 03hrs

Subject: Educational Psychology

Total Marks: 100

Section A

(Marks: 20)

Q.1. Choose the correct answer and write them in your Answer book.

- i. A teacher uses Piaget's stages of development to plan activities suited to the cognitive level of students. This demonstrates:
(a) Application of developmental psychology (b) Understanding of behavioral theory
(c) Use of reinforcement theory (d) Application of assessment criteria
- ii. When a teacher provides rewards for punctuality to encourage timely attendance, it reflects:
(a) Cognitive theory (b) Constructivism (c) Behaviorism (d) Humanism
- iii. A teacher designs group activities to foster social interaction based on Vygotsky's theory. This is an example of:
(a) Cognitive application (b) Social constructivist approach
(c) Behavior modification (d) Direct instruction
- iv. If a teacher uses Bloom's taxonomy to align objectives and assessment tasks, this shows:
(a) Application of learning hierarchy (b) Evaluation of student traits
(c) Knowledge recall (d) Behavior modification
- v. A teacher assigns a real-world science experiment to test understanding of concepts. This demonstrates:
(a) Application of knowledge (b) Memorization
(c) Understanding only (d) Comprehension check
- vi. Using Gardner's Multiple Intelligences theory, a teacher designs musical activities for auditory learners. This reflects:
(a) Uniform teaching method (b) Differentiated instruction
(c) Cognitive learning (d) Memory-based learning
- vii. Applying Bandura's Social Learning Theory, a teacher models good classroom behavior. This illustrates:
(a) Direct reinforcement (b) Observational learning
(c) Trial and error learning (d) Classical conditioning
- viii. During lesson planning, a teacher considers students' attention span and motivation. This demonstrates understanding of:
(a) Behavioral modification (b) Educational psychology principles
(c) Statistical analysis (d) Assessment design only
- ix. When a teacher adapts teaching style after observing low engagement, this shows:
(a) Evaluation (b) Reflective practice (c) Summative grading (d) Standardization
- x. Designing rubrics for student projects based on specific learning outcomes shows:
(a) Diagnostic grading (b) Behavioral reinforcement
(c) Objective-type testing (d) Application of performance evaluation
- xi. While teaching a moral lesson, a teacher asks students to analyze characters' decisions. This demonstrates:
(a) Knowledge recall (b) Summative grading
(c) Behavioral conditioning (d) Critical thinking application
- xii. Applying Bloom's affective domain, a teacher encourages students to respect diverse views. This shows:
(a) Emotional learning application (b) Psychomotor practice
(c) Cognitive task mastery (d) Peer grading
- xiii. Using lab activities to develop practical science skills demonstrates:
(a) Cognitive recall (b) Psychomotor application
(c) Behavioral assessment (d) Abstract thinking
- xiv. Asking students to redesign a story ending in literature applies which Bloom's level?
(a) Understanding (b) Applying (c) Creating (d) Evaluating
- xv. A teacher comparing student achievement across two sections to improve instruction applies:
(a) Norm-referenced analysis (b) Criterion-referenced evaluation
(c) Formative feedback (d) Summative scoring
- xvi. Encouraging students to self-assess using rubrics demonstrates:
(a) Diagnostic grading (b) Metacognitive awareness
(c) Behavioral reinforcement (d) Norm referencing

- xvii. Designing an activity that requires students to build models after a lesson applies:
 - (a) Psychomotor skills
 - (b) Emotional learning
 - (c) Abstract reasoning
 - (d) Written assessment
- xviii. When a teacher pairs fast learners with slow learners for peer tutoring, this reflects:
 - (a) Social learning principle
 - (b) Behaviorism
 - (c) Assessment for learning
 - (d) Reinforcement theory
- xix. Students applying Erikson's psychosocial stages to real-life school behavior analysis show:
 - (a) Recall level learning
 - (b) Application of theory
 - (c) Memorization of stages
 - (d) Testing
- xx. If a teacher designs case studies to assess decision-making, it demonstrates:
 - (a) Real-world application of learning
 - (b) Recall-level testing
 - (c) Summative grading
 - (d) Norm referencing

Section B

(Marks: 40)

NOTE: Attempt any EIGHT questions. All questions carry equal marks.

- Q.1. Evaluate the strengths and limitations of using **growth mindset** interventions in classrooms with mixed ability learners.
- Q.2. How do physical changes during middle childhood influence a child's confidence and social interactions with peers?
- Q.3. Describe how praise for intelligence and praise for effort each affect students' motivation and long-term academic performance.
- Q.4. Describe how social development enables children to form positive relationships and adapt effectively to their social surroundings.
- Q.5. Why is reflective practice important for teachers, and how does it contribute to professional growth and effective teaching?
- Q.6. How can group activities and peer collaboration enhance learning within a student's ZPD in your classroom context?
- Q.7. Describe how the scientific method can be applied in a classroom setting to understand and solve students' behavioral or learning problems.
- Q.8. Explain the difference between natural and participant observation in educational psychology and how each can help teachers understand student behavior.
- Q.9. How can collaboration between teachers, parents, and counselors ensure better mental health outcomes for learners?
- Q.10. As a teacher, how can you identify early signs of mental health challenges among your students and apply preventive strategies to support their emotional well-being in the classroom?
- Q.11. How can observation and data collection techniques (like interviews, questionnaires, and learning inventories) help teachers improve classroom teaching and student learning outcomes?

Section C

(Marks: 40)

NOTE: Attempt any FOUR questions. All questions carry equal marks.

- Q.1. Discuss how you can integrate the behaviorist and cognitivist theories of learning in lesson planning to cater to both observable behaviors and internal mental processes. Give suitable classroom examples.
- Q.2. Critically evaluate the role of teachers in identifying and addressing early signs of mental health issues among students.
- Q.3. Discuss how schools can promote mental health among teachers and learners through structural changes such as workload management, supportive relationships, and inclusive teaching practices. Provide examples from educational settings.
- Q.4. Critically analyze the differences between guidance and counseling in terms of their purposes, processes, and outcomes. How can both complement each other in promoting students' holistic development?
- Q.5. Discuss the relationship between physical development and socio-emotional growth during middle childhood, providing examples from school or home environments.
- Q.6. Discuss how teachers and parents can promote healthy social development in children at different stages (early childhood, later childhood, and adolescence). Give practical examples from school or home situations.
